

# Because we can't always "make hay while the sun shines" ...

Forage and cereal preservation specialists Kelvin Cave Ltd. now supply a range of preservatives specifically formulated to treat all baled forages across the complete dry matter range. We also offer preservative applicators and moisture meters.

In fact, all you need to make the best possible bales, whatever the British weather throws at us!

Put an end to opening bales like this, because at Kelvin Cave Ltd we have the know-how to help you do things better!

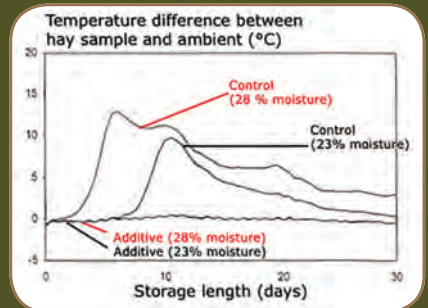

## **Silage bales to 50% DM - Safesil Challenge**

A ready to use solution of human grade food preservatives proven to kill yeasts, moulds and undesirable bacteria resulting in a hygienic and efficient fermentation and a palatable, stable product with more retained nutrients.

## **BaleSafe for wrapped haylage from 50-75% DM & hay up to 25% moisture**

A unique blend of propionic and benzoic acids and human food preservatives to preserve higher dry matter forages.

**Both products are low odour, non corrosive and safe to feed all ruminants and horses.**

## Silaspray Compact

Accurate and even application of preservatives is critical as under-dosing or uneven application can result in spoilage and over-application will not be cost effective.

The 12V Silaspray Compact is easy to install and simple to operate. With an operating pressure of up to 3 bar and non-return nozzles it ensures even application throughout the bale. The simple electronic control can be programmed with the baler output and desired application rate to ensure correct application. An optional cut-off switch ensures no preservative is wasted when bales are released or when turning on headlands.

Similar systems are available for forage harvesters and forage wagons.

## Wile 25 Moisture Meter

The Wile 25 is a simple, reliable and easy to use moisture meter. The dish probe (as shown) allows crop moisture levels to be quickly and accurately assessed in the field prior to baling to ensure Safesil or BaleSafe are applied at the correct rate.

An optional, interchangeable bale probe is also available.

All you need to grow
